

2019 GM 1500/2020 GM 1500+ WIRE HARNESS

Rather than a 7-way plug, you have received a tail light harness, which features four 6-prong plugs, two female and two male.

This will plug in between the trailer hitch and your spare tire. There will be a box on either side of the rail.

Our harness is a T system, so unplug your trucks harness, plug ours into the box, then plug our harness into the plug you have. This will control the lights in the rack without the annoying "trailer connected" message because these boxes control the taillights directly.
