

6” Oval LED Light Replacement

Installation Guide

Installation

1. Firmly push in one side of the 6” oval LED light so that the other side has enough exposed to grab with your fingers.

2. Grab the end that is now sticking out and pull out the entire light.

3. Replace the lights you want by pulling up on the locking tab on the connector with your finger and pulling the connector apart from the light.

   When installing the connector ensure there is a so audible click to ensure the locking tab is properly secured to the light.

4. Push in one end of the light and then firmly push in the remaining end. Please ensure the rubber gasket is flush with the rack/light to ensure light is fully installed.

   NOTE: you will be able to push on the light and it will move in/out, but with the gasket fully flush with rack/light it is now properly installed.
